

The system is emotion-free and uses artificial intelligence to identify in real time via video-live-stream people who do not wear a face mask.

In times of COVID 19, it is essential to wear a face mask in public areas. In the current situation, visitors from all institutions need to be sensitized. Due to the many signs and information labels at public areas people sometimes forget or overlook to wear the mask. It is common that employees advise customers and guests to wear a mask, but social tensions and unpleasant situations can occur in the already very tense time.

Especially where crowds cannot be prevented, everything should be done to check and enforce the mask requirements.

ALBA MASK GUARD

Digital face mask detector

We have developed an effective and reliable monitoring system for highly frequented locations – the digital face-mask-recognizer!

The system based on robust, industrial camera-technology and a plug & play AI software. The Recognizer inform the user by a green or red LED lamp and an acoustic warning signal if they are wearing a mask.
