

CREATING INDIVIDUAL TECHNOLOGIES

A large industrial rotary-table system in a factory setting. The system is a large, circular, red-painted metal structure with a complex internal mechanism. It is surrounded by safety railings and a yellow bucket. A person is visible in the foreground, looking at the system. The background shows other industrial equipment and a factory floor.

YOUR PARTNER FOR
INNOVATIVE TECHNOLOGIES

ROTARY-TABLE-SYSTEMS

www.albatools.com

Alba is an international technology leader in creating individual technologies and offers many additional processes in the production chain for the manufacturing of high-quality components.

Whenever high quantities and synchronized processes are paramount, rotary tables offer an ideal manufacturing solution due to their optimized design.

Rotary tables are rotating platforms which, depending on the load case and size, are supported either only in the center by a central bearing or additionally by rollers in the area of the loading. The supply of all media is realized by feed-throughs at the center of the rotary table.

AREAS OF APPLICATION

- | Mobility Industry
- | Acoustic Applications
- | Medical Fields
- | Furniture Industry
- | Civil Engineering Applications

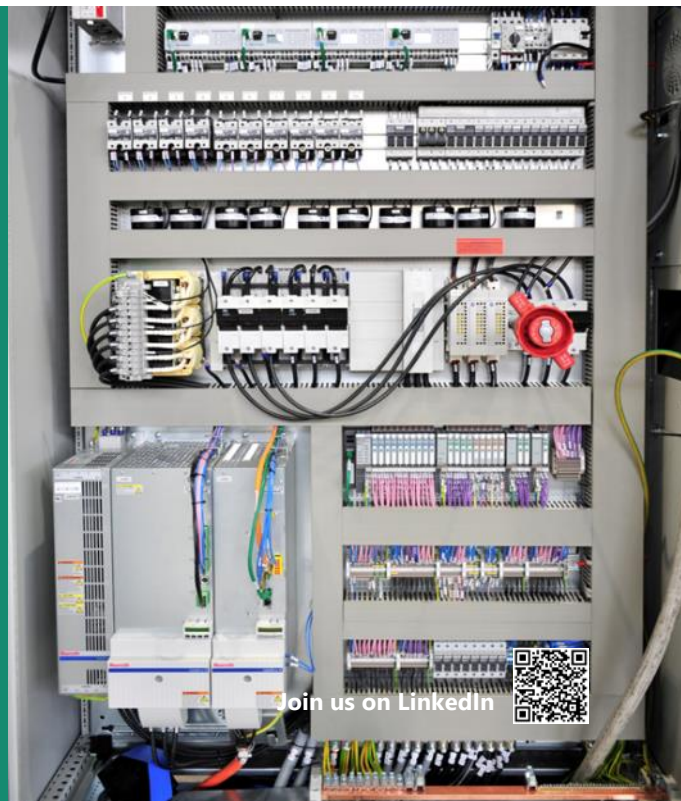

As a partner of well known companies, we have decades of experience in rotary table construction and meet the highest standards regarding precision, scheduling, and quality assurance through a high degree of vertical integration.

BENEFITS OF ALBA ROTARY TABLE SYSTEMS

- | Production line footprint designed for efficiency (Ø 5,5m to 16m)
- | A variety of rotary table solutions, capable of running small lightweight to large heavy tool carriers
- | 3 different operation techniques:
Variable | Stop & Go | Continuous movement
- | Precise positioning and easy maintenance
- | Driven by a circulating chain or centrally using a driven rotary axis
- | High OEE (Overall Equipment Effectiveness)

WHY AT ALBA

- | Qualified engineers with years of experience
- | Strong in-house R&D department
- | A lean and modern organization
- | Vast and flexible machine park
- | Family-owned

A combination of decades of experience, attained know-how and a high degree of vertical manufacturing integration, gives us the control to maintain high quality throughout all manufacturing phases and the opportunity to manufacture rapidly.

WHAT DO WE OFFER

- | Full Development & Full Service
- | Cost reduction through low energy consumption
- | Scalable systems & inhouse design
- | Individual systems according to customer requirements
- | HMI development tailored to customer needs
- | Production line and equipment relocation
- | Refurbishment of existing production lines, machinery, and equipment
