
ENVIRONMENTAL POLICY

We consider responsibility for the environment to be part of our commercial activity.

This takes place on the basis of the following principles:

- Consideration and minimisation of possible environmental risks when selecting production technologies
- The use of environmentally friendly materials and substances
- The use of all possibilities to reduce air, soil and water pollution
- Reducing energy consumption and therefore also greenhouse gases and waste through suitable measures
- The use of technologies that protect resources and the environment with continuous optimisation of material usage
- Compliance with all legal and official environmental protection provisions

We are committed to environmentally-friendly and energy-efficient actions and we undertake to continuously improve our performance.

The products we manufacture stand out due to their long service life, and they should remain environmentally compatible and resource-efficient throughout their entire life cycle.

In coordination with our customers, we consider environmental and energy aspects right from the development and design stage.

Maintaining biodiversity is very important to us, and we therefore prefer suppliers who act in accordance with ecological principles.

We enter into dialogue regarding environmental protection with neighbours, authorities, employees, customers and other interested groups - directly and actively, and we endeavour to establish trusting relationships in this way.
